Sequence 11, Application US/09849602

Patent No. 6794501

GENERAL INFORMATION:

APPLICANT: Scanlan, Matthew J.

APPLICANT: Old, Lloyd J.

APPLICANT: Stockert, Elisabeth

APPLICANT: Chen, Yao-Tseng

TITLE OF INVENTION: Colon Cancer Antigen Panel

FILE REFERENCE: L0461/7105 (DRV)

CURRENT APPLICATION NUMBER: US/09/849,602

CURRENT PILING DATE: 2001-05-04

NUMBER OF SEQ ID NOS: 30

SOFTWARE: PatentIn version 3.0

LENGTH: 6018

N

This sequence encodes the Tankyrase homologue isotype 2 (TaHo-2) protein of the invention. The invention also relates to the TaHo-1 protein. The TaHo proteins are useful for inducing or preventing cells, and in the study or treatment of conditions mediated by the cell cycle proteins, such as to diagnose, treat or prevent cell cycle cycle proteins, such as to diagnose, treat or prevent cell cycle associated disorders, preferably cancer. The TaHo coding sequences are useful as hybridisation probes, in chromosome and gene mapping and in the generation of anti-sense DNA and RNA. The coding sequences are also cusful for the preparation of TaHo, for generating either transgenic animals or knock out animals which, in turn, are useful in a development and screening of therapeutically useful agents, in gene therapy, as vacine, and for construction of hybridisation probes for mapping the gene which encodes TaHo and for the genetic analysis of individuals with cuseful in screening assays or preventing cell cycle associated disorders such as cancer Claim 13; Fig 2; 63pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel recombinant nucleic acid encoding the cell cycle protein TaHo, a tankyrase H isoform. The products of the invention have cytostatic and immunostimulant activity and can be used for gene therapy and in vaccines. The cell cycle protein TaHo and the nucleic acid encoding the protein are useful for diagnosing and treating a cell cycle related disorder, e.g. cancer, or for inhibiting growth of tumour cell. The methods are useful for screening for a bioactive agent capable of binding to a cell cycle protein tankyrase H, or a bioactive agent capable of modulating a cell cycle protein tankyrase H or PARP (poly ADP-ribose polymerase) activity. The antibodies are useful for inducing an immune response against the cell cycle proteins. This sequence encodes the tankyrase H isoform 2, TaHo-2, isolated from clone K23 which is described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09
                                                                                                                                                                                                                                                                                                                                                                                      New recombinant nucleic acid encoding a cell cycle protein, useful for diagnosing and treating a cell cycle related disorder, e.g. cancer.

                                                                                                                                                            The invention relates to a method for screening a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21. The invention is useful in gene therapy. The method is useful for screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for preparing a composition for diagnosing or treating cancer. The present sequence is human tankyrase homologue isotype 2 (TaHo-2) DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Screening for a bioactive agent capable of interfering with the binding of a tankyrase H cell cycle protein and p21 for diagnosing or treating cancer by combining a tankyrase H cell cycle protein, a candidate bioactive agent and p21.

The invention relates to a recombinant polypeptide (I) such as cell cycle protein e.g. tankyrase homologue (TaHo), comprising an amino acid sequence having 85% or more sequence identify to the 1065 amino acid sequence of ADY97761 or the 1240 amino acid sequence of ADY97761 or the 1240 amino acid sequence of ADY97762. Also described: (1) diagnosing cancer, which involves determining the activity of control with a control; (2) treating (M1) an individual mith a cell cycle control with a control; (2) treating (M1) an individual mith a cell cycle related disorder, which involves administering to the individual an control with a control; (3) a recombinant nucleic acid (II) encoding (II), comprising a nucleic acid that hybridizes under high stringent conditions to a sequence complementary to the 3797 base pair sequence of ADY97759 or the 3816 base pair sequence of ADY97760, or a nucleic acid having 85% or more sequence identity to ADY97759 or ADY97760; (4) an expression vector (III) comprising (II) operably linked to regulatory sequences recognized by a host cell (IV) transformed with the nucleic acid having 85% or comprising (II) or (III); (6) producing (I); (7) a polypeptide that comprising (II) or (III); (6) producing (I); (7) a polypeptide that confinition TaHo activity; (1) is useful for screening a bioactive agent capable of modulating (I); (1) as useful for treating endicing with the binding of (1), or screening for agent e.g. antisense collowate in the present sequence encodes the human tankyrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    301 GAGAGCIGITICGAGGCGTGCCGCAACGGGGACGTGGAACGAGTCAAGAGGCTGGTGACGC 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the human SPANK cDNA. The SPANK protein comprises 3 domains: (a) a SAM (sterile alpha motif) domain; (b) a PARP (poly adenosine diphosphate-ribose polymerase) cardalytic domain; and (c) an ANK domain composed of ankyrin repeats. SPANK is a cytosolic protein which can poly(ADP-ribosyl) are itself. SPANK binds insulin-responsive aminopeptidase (IRAP) and modulates translocation of GLOT4 in the perinuclear region of adpocytes. It is an an effector in the insulin signalling pathway in eukaryotic cells. SPANK is useful for reducing body mass, reducing glucose intolerance or insulin resistance, for preventing
                                                                                                                                                                                                                                                                                                                                     SPANK; SAM; sterile alpha motif; PARP; insulin resistance; poly adenosine diphosphate-ribose polymerase; catalytic domain; ANK; ankyrin repeat; cytosol, insulin-responsive aminopeptidase; IRAP; GLUT4; adipocyte; insulin signalling pathway; hyperlipidaemia; glucose intolerance; atheromatous disease; atherosclerosis; obesity; cardiac insulficiency; coronary insulficiency; stroke; high blood pressure; non-insulin dependent diabetes; hypertension; hyperuricemia; Syndrome X; muscular dystrophy; muscle atrophy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New insulin signaling protein SPANK, useful for reducing body mass, glucose intolerance or insulin resistance and for preventing or treating obesity-related and muscle-related diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1;
                                                                                                                                                                                                                                                                                                                                                     The present sequence is a version of the human tankyrase II coding sequence. Its protein is thought to be involved in signal transduction in the cell, and to have binding activity for other telomere-associated proteins. It is possible that it plays a role in the regulation of telomere length, thus affecting the replicative ability of the cell. The protein is useful for ribosylating target proteins, for determining tankyrase II binding activity in a sample, and for modulating telomere length in a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere length, in which TRF1 has a role, is linked to ageing and cancer. The sequences are useful in the treatment of cancers and inflammatory

This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-ribosylation activity and is involved in the modification of TRF1, which is a telomere-specific binding protein. The regulation of telomere length, in which TRF1 has a role, is linked to ageing and cancer. The sequences are useful in the treatment of cancers and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
